With the Conservatives trailing the Labour Party in opinion polls, U.K. Prime Minister Rishi Sunak on Tuesday implored British voters to throw him a lifeline in the July 4 election, putting the promise of lower taxes at the heart of the Conservative Party's election manifesto. > PAGE 15

Lt. Gen. Upendra Dwivedi to take over as Army chief

The Hindu Bureau
NEW DELHI

The Union government on Tuesday announced the appointment of Lieutenant-General Upendra Dwivedi as the next Chief of the Army Staff. He is now the Vice-Chief and will take over from General Manoj Pande on June 30. "The government has appointed Lt. General Upendra Dwivedi, presently serving as Vice-Chief of the Army Staff, as the next Chief of the Army Staff with effect from the afternoon of June 30, 2024. The present Chief of the Army Staff, General Manoj C. Pande, demits office on

Lt. Gen. Upendra Dwivedi

June 30, 2024," the Defence Ministry said in a late-evening statement. General Pande, who was to retire on May 31, had been given a month's extension. The extension had created speculation in the military fraternity of a possible suppression and

deviation from the seniority principle in the appointment of service chiefs. Lt. Gen. Dwivedi, born on July 1, 1964, was commissioned into the Infantry (Jammu & Kashmir Rifles) of the Army on December 15, 1984. His command roles include leading the 18 Jammu & Kashmir Rifles Regiment and the 26 Sector Assam Rifles Brigade. In the rank of Lieutenant-General, he has held important positions, including that of Director-General, Infantry, and General Officer Commanding-in-Chief, Northern Command, from 2022 to 2024, before taking over as Vice-Chief.

UNSC endorses resolution to end war on Gaza

Associated Press
UNITED NATIONS

The United Nations Security Council on Monday overwhelmingly approved its first resolution endorsing a ceasefire plan aimed at ending the eight-month war between Israel and Hamas in Gaza. The U.S.-sponsored resolution welcomes a ceasefire proposal announced by President Joe Biden that the United States says Israel has accepted. It calls on the militant Palestinian group Hamas to accept the three-phase plan. The resolution — which was approved with 14 of the 15 Security Council members voting in favour and Russia abstaining — calls on Israel and Hamas

Shot in the arm: U.S. Ambassador to UN Linda Thomas-Greenfield, centre, votes during the meeting on Tuesday in New York. AFP

both parties to approve the proposal "without delay and without condition." Whether Israel and Hamas agree to go forward with the plan remains in question, but the resolution's strong support in the UN puts added pressure on

Mohan Majhi, BJP's tribal face, picked as Odisha Chief Minister

The four-time MLA of Keonjhar was party's chief whip earlier; BJP stakes claim to form govt. for the first time in the State. KV. Singh Deo, six-time MLA from Patnagarh, and Pravat Parida, first-time MLA of Nimapara, to be Deputy Chief Ministers

Satyasundar Barik
BHUBANESWAR

Mohan Charan Majhi, four-time MLA and tribal leader, will take the oath of office as Chief Minister of Odisha on Wednesday. The BJP on Tuesday staked claim to form a government in the State after the party's MLAs-elect unanimously elected Mr. Majhi the BJP Legislature Party leader. This is the first time the BJP is forming a government in the State on its own after the saffron party's arrival in Odisha in the mid-1980s. It won 78 seats in the 147-member Assembly. The party has received letters of support from three independent MLAs. The Biju Janata Dal has won 51 seats and the Congress 14. One seat went to the CPI(M). The week-long specula-

Power pellets: Rajnath Singh, Mohan Charan Majhi and Governor Raghubar Das at the Raj Bhavan in Bhubaneswar. BISWARAJAN ROUT

tion surrounding the BJP's chief ministerial pick reached its climax when Defence Minister Rajnath Singh and Union Environment Minister Bhupendra Yadav, central observers of the BJP, landed in Bhubaneswar in the afternoon. Mr. Majhi was the BJP's chief whip in the 16th Odisha legislative assembly. Veteran BJP leaders — K.V. Singh Deo, six-time MLA

from Patnagarh Assembly constituency, and Pravat Parida, first-time MLA from Nimapara Assembly segment — will serve as Deputy Chief Ministers.

"Fullfill all promises" A total of 4.5 crore people have voted BJP to power to bring transformation and fight corruption. I acknowledge their support. Prime Minister Narendra Modi, who is loved by all Odias, had exuded confidence that the government would change and the BJP would come to power. It has come true," said the CM-designate. Mr. Majhi said, "The new government will fulfil all promises made in party manifesto."

The Raj Bhavan, in a press communique, said, "After being satisfied that the BJP commands majority in the Odisha Legislative Assembly, the Governor

extended invitation to Mohan Charan Majhi to form the new government."

The CM-designate accepted the invitation and communicated to the Governor that the Council of Ministers would like to be sworn in at 4.55 p.m. on Wednesday.

Preparations for the swearing-in of the Chief Minister and his Cabinet colleagues were in full swing. Prime Minister Narendra Modi will participate in the ceremony at Janata Maidan in Bhubaneswar. Chief Ministers of several BJP-ruled States, Union Ministers and top BJP leaders are expected. The State government has cancelled leaves of all government officials till June 30 in view of possible new programmes that may be launched.

Biden's son convicted of all 3 charges in gun case

Agence France-Presse
WILMINGTON

A jury found Hunter Biden, son of U.S. President Joe Biden, guilty of federal gun charges on Tuesday. In a historic first criminal prosecution of the sitting President. The 54-year-old was convicted on all three of the felony counts stemming from his possession of a handgun while addicted to crack cocaine. He could face up to 25 years in prison, although it is unlikely as a first-time offender. The date for sentencing has not been set.

Under scanner: Actor Darshan Thoogudeepa being taken for a medical examination in Bengaluru on Tuesday. K. SURESH MOSES

The Hindu Bureau
BENGALURU

Kannada actor Darshan Thoogudeepa was taken into custody in connection with a murder case on Tuesday. Mr. Thoogudeepa and actor Pavithra Gowda have been named prime accused in the case.

The Bengaluru police are investigating the death of one Remukaswamy, a fan of the actor, who was allegedly tortured and murdered on the charge of harassing Ms. Gowda, a close friend of Mr. Thoogudeepa, online. The police had taken nine persons for questioning and when Mr. Thoogudeepa and actor Pavithra Gowda were taken to the Bowring Hospital for a medical examination.

He was brought to the city from a hotel in Mysuru and grilled for several hours before being taken to the Bowring Hospital for a medical examination.

Six-day custody
After seven hours of intense questioning, the Kamakshipalya police produced Mr. Thoogudeepa and his associates before the Additional Chief Metropolitan Magistrate court, after which they were taken into six-day police custody for further investigation.

The police, while submitting the remand appli-

cation, told the court that Mr. Thoogudeepa, Ms. Gowda and others were required for spot mahajar and their call records details needed to be verified. Considering the application, the court ordered one week police custody.

"Tortured to death" Mr. Thoogudeepa, along with 12 of his associates, has been accused of kidnapping 33-year-old Remukaswamy from Chitradurga and torturing him to death before dumping his body in a stormwater drain in Kamakshipalya on June 8. A food delivery man noticed the body floating in the drain and alerted the police. The police found that the body had multiple injuries and concluded that it was murdered.

Remukaswamy had allegedly commented on Ms. Gowda's social media account, accusing her of creating a rift between his favourite film star and his wife.

Remukaswamy allegedly used indecent comments, which infuriated Ms. Gowda. She allegedly sought the help of the accused to "teach him a lesson". As per the plan, the accused had roped in Mr. Raghavendra to trace Remukaswamy.

The accused allegedly tortured and beat up Remukaswamy to death.

U.S. Secretary of State Antony Blinken says Israel and Hamas agree to go forward with the plan remains in question, but the resolution's strong support in the UN puts added pressure on

deal, saying that Israel is still committed to destroying Hamas. **Hamas's reaction** Hamas said it welcomed the adoption of the resolution and was ready to work with mediators in indirect negotiations with Israel to implement it. The statement was among the strongest from Hamas, but it stressed the group would continue its struggle against Israeli occupation. "Efforts are continuing to ensure implementation by the Israeli side," Hamas spokesperson Iyad Taha said on Tuesday. He said Israel was "stalling and procrastinating in order to continue the aggression." Russia's UN Ambassador Vasily Nebenzia said Moscow abstained because details of the plan haven't been disclosed and "we have a whole host of questions." "Hamas is called upon to accept this so-called deal, but still there is no clear clarity regarding official agreement from Israel," Mr. Nebenzia said. Algeria's UN Ambassador Amar Benjama, the Arab representative on the council, said that while the text was not perfect, "it offers a glimmer of hope to the Palestinians, as the alternative (the) continuing suffering."

Lt. Gen. Upendra Dwivedi to take over as Army chief

The Hindu Bureau

NEW DELHI

The Union government on Tuesday announced the appointment of Lieutenant-General Upendra Dwivedi as the next Chief of the Army Staff. He is now the Vice-Chief and will take over from General Manoj Pande on June 30.

“The government has appointed Lt. General Upendra Dwivedi, presently serving as Vice Chief of the Army Staff, as the next Chief of the Army Staff with effect from the afternoon of June 30, 2024. The present Chief of the Army Staff, General Manoj C. Pande, demits office on

Lt. Gen. Upendra Dwivedi

June 30, 2024,” the Defence Ministry said in a late-evening statement.

General Pande, who was to retire on May 31, had been given a month’s extension. The extension had created speculation in the military fraternity of a possible supersession and

deviation from the seniority principle in the appointment of Service chiefs.

Lt. Gen. Dwivedi, born on July 1, 1964, was commissioned into the Infantry (Jammu & Kashmir Rifles) of the Army on December 15, 1984. His command roles include leading the 18 Jammu & Kashmir Rifles Regiment and the 26 Sector Assam Rifles Brigade.

In the rank of Lieutenant-General, he has held important positions, including that of Director-General, Infantry, and General Officer Commanding-in-Chief, Northern Command, from 2022 to 2024, before taking over as Vice-Chief.

IISc develops method to remove heavy metal contaminants from groundwater

The Hindu Bureau

BENGALURU

Indian Institute of Science (IISc) researchers have developed a novel remediation process for removing heavy metal contaminants such as arsenic from groundwater.

According to IISc, the three-step method, which is patent-pending, also ensures that the removed heavy metals are disposed of in an environment-friendly and sustainable manner, instead of sending untreated heavy metal-rich sludge to landfills from where they can potentially re-enter groundwater.

“In every technology that exists, you can take

Polluting groundwater: Heavy metal contaminants can significantly affect human and animal health. FILE PHOTO

out arsenic and provide clean water. However, after you remove the arsenic, you must do something about it so that it doesn't re-enter the environment, and that aspect is not given due consideration in the existing methods. Our pro-

cess was designed to solve this problem,” said Yagnaseni Roy, assistant professor at the Centre for Sustainable Technologies, whose lab has developed the method.

IISc said that according to reports, 113 districts in 21

States in India have arsenic levels above 0.01 mg per litre while 223 districts in 23 States have fluoride levels above 1.5 mg per litre, which are beyond the permissible limits set by the Bureau of Indian Standards (BIS) and the World Health Organisation.

These contaminants can significantly affect human and animal health, necessitating their efficient removal and safe disposal.

The researchers have been working with the IN-REM Foundation and Earthwatch, both NGOs, to deploy and test these systems in rural areas such as Bhagalpur in Bihar and Chickballapur in Karnataka.

What are the impacts of water pollution?

Urban and domestic use

Increased water treatment and inspection costs, maintenance costs from scouring and premature ageing of infrastructure, increased wastewater treatment costs with implementation of more strict regulations. Emergency and clean-up costs from spills/accidents.

Ecosystem health

Damage to freshwater and marine ecosystems (e.g. fish kill, invertebrates, benthic fauna, flora, habitat degradation) and loss of ecosystem services, which may require investment in additional or different grey infrastructure alternatives to replicate these services.

Human health

Polluted water is the world's largest health risk, and continues to threaten both quality of life and public health. Associated with this are health service costs, loss life expectancy, and emergency health costs associated with major pollution events.

Industrial productivity

Exclusion of contaminated water for industrial use results in increasing water scarcity. Scouring of infrastructure, and clean-up costs from spills/accidents.

Social values and tourism

Prohibition from recreational use (e.g. swimming, fishing, seafood gathering), beach closure, impacts on aesthetics, cultural and spiritual values. Losses in fishing, boating, rafting and swimming activities to other tourism activities or to other ventures with superior water quality.

Agricultural productivity

Exclusion of contaminated water for irrigation results in increasing water scarcity. Irrigation with contaminated water causes damage to, and reduced productivity of, pasture and crops, soil contamination, impacts to livestock health and production, and scouring of infrastructure.

Commercial fisheries

Direct and indirect fish kill, contamination of shellfish.

Property values

Waterfront property values can decline because of unsightly pollution and odour.

Tainted groundwater

Sixteen States show a high prevalence of uranium concentrations above the WHO provisional guideline value ($30\mu\text{g/L}$)

- India has no standards for uranium levels in groundwater
- There have been reports of high levels of uranium in Andhra Pradesh
- Over-pumping of groundwater causes a decline in water levels
- This induces oxidation conditions that enhance uranium enrichment in shallow groundwater

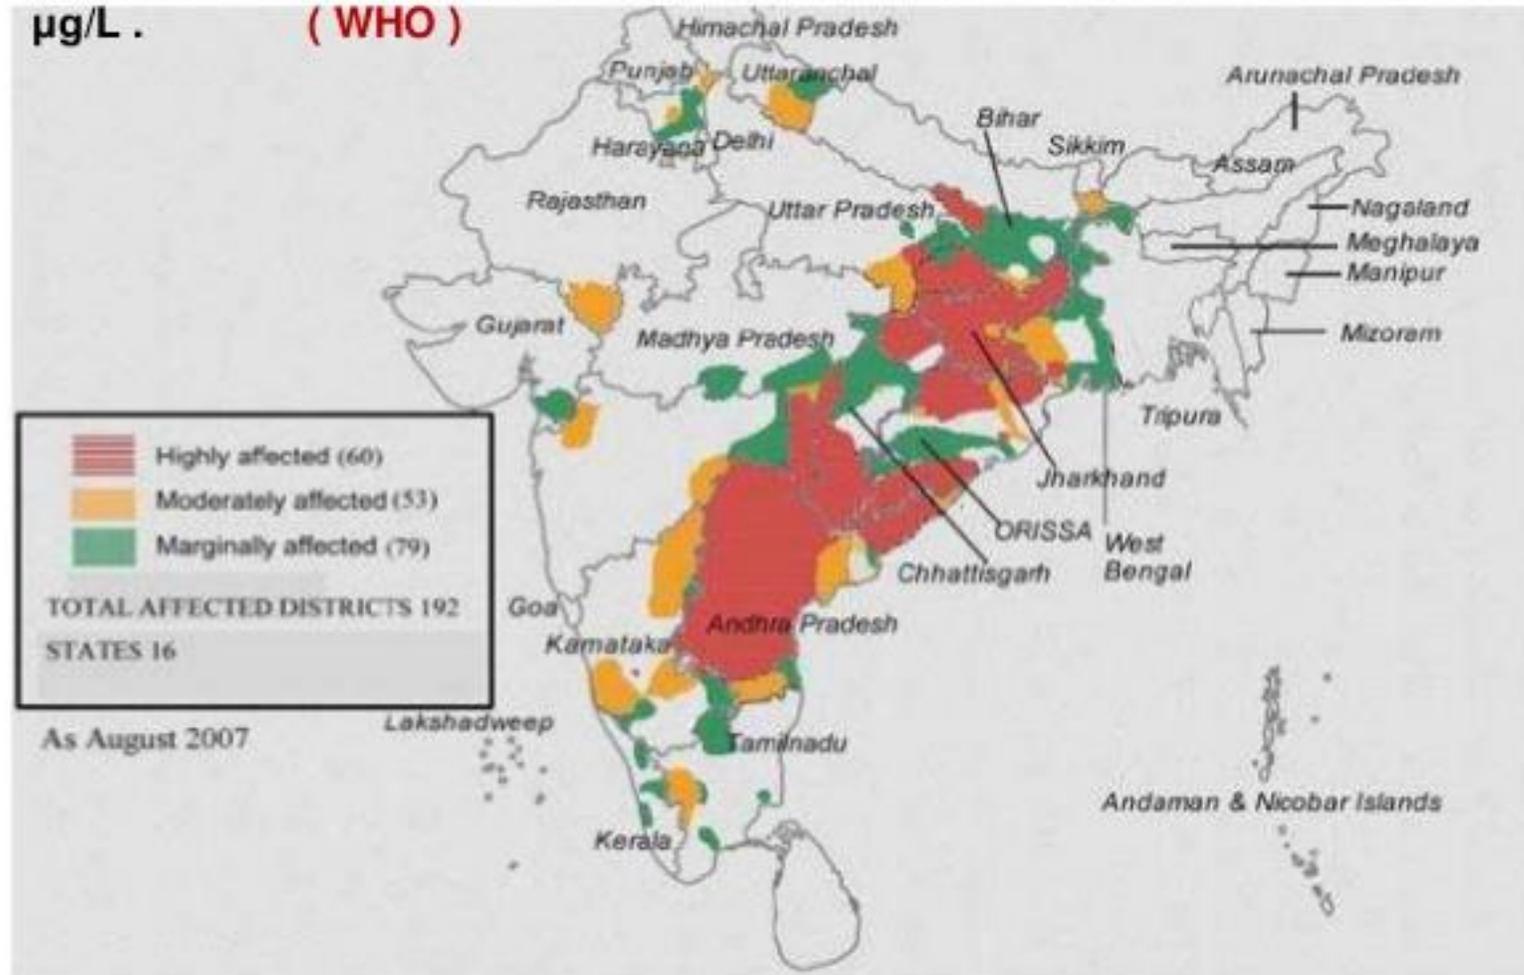

Source:

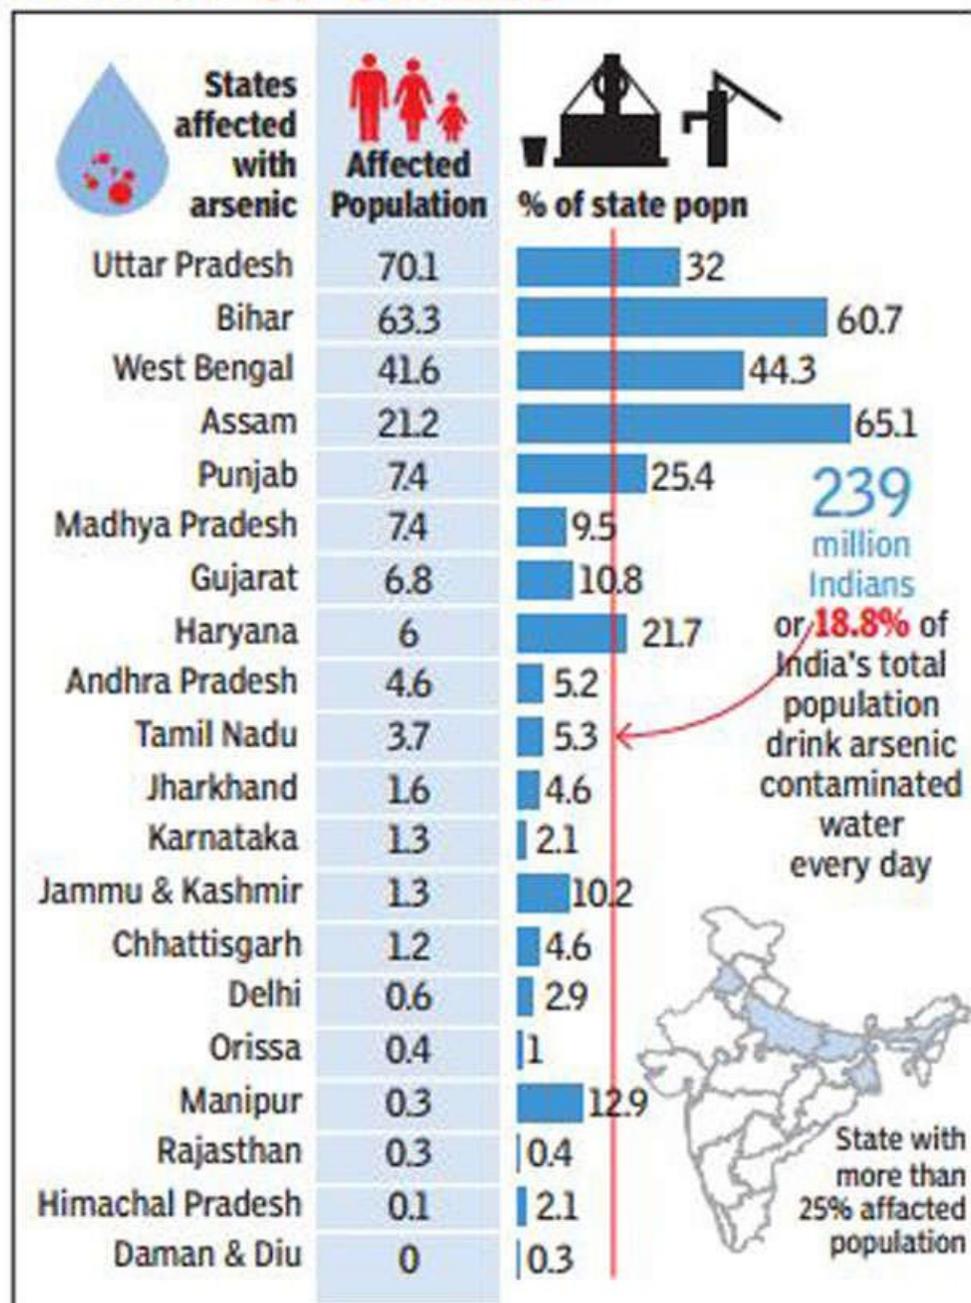

"Large-Scale Uranium Contamination..." Rachel M. Coyte et al.

AREA AFFECTED WITH ARSENIC

Fifty districts of Bangladesh and 9 districts in West Bengal, India have arsenic levels in groundwater above the maximum permissible limit of 50 $\mu\text{g/L}$. (WHO)

New portable atomic clock offers accurate timekeeping at sea

Researchers have built a portable optical atomic clock that can be used onboard ships. While it traded some accuracy for size and robustness, it was still more accurate than other vessel-borne timekeeping options. According to the researchers, it is the most performant optical clock at sea

Tulasi Gurral

Atomic clocks are the backbone of the Global Positioning System (GPS), the network of satellites above the earth that we use every day to navigate cities, respond to emergencies, and organise military operations, among other things. Despite being one of the most accurate timekeeping methods, however, there is still room for improvement. Scientists today are pushing the boundaries with a new technology called optical atomic clocks.

But for being such sophisticated instruments, both these clocks are also bulky, power-hungry, fragile, and expensive. As a result, their installation and operations are often restricted to big research facilities.

A study recently published in the journal *Nature* introduced a kind of portable optical atomic clock that can be used onboard ships. While these devices traded some accuracy for size and robustness, they were still more accurate than other vessel-borne timekeeping options.

According to the researchers, this is the most performant optical clock based at sea and represents a significant advancement in optical timekeeping.

The working of an atomic clock Atomic clocks work by keeping time using atoms. One popular design uses atoms of an isotope of caesium, Cs-133. The International Committee for Weights and Measures first used it in 1967 to define the duration of one second. India also uses Cs-133 atomic clock to define the second for timekeeping within its borders.

Cs-133 is a highly stable atom and is found naturally, which is why it is so commonly used in atomic clocks.

Atomic clocks exploit a fundamental property of all atoms: their ability to jump between different energy levels. Energy levels are like the steps of a ladder. An atom climbs up the ladder by absorbing energy, like electromagnetic radiation.

In a Cs atomic clock, the energy needed for the atom to jump to a higher energy level matches the frequency of microwave radiation. This frequency is related in some fully understood way to the duration of a second.

First, researchers keep the Cs atoms in a cavity, to which microwave radiation of a specific frequency is applied. When the frequency of this radiation matches the transition energy of the Cs atoms, the match-up is called a resonance.

The Cs-133 atoms absorb this radiation and jump to a higher energy level. This transition only happens when the frequency of the applied radiation is equal to 9,192,631,770 Hz.

Put another way, when the Cs-133 atom completes 9,192,631,770 oscillations between the two energy levels, one second will have passed.

The accuracy of atomic clocks comes from a feedback mechanism that detects any changes in the resonance frequency and adjusts the microwave radiation to maintain resonance.

Thus, a caesium atomic clock loses or gains a second every 1.4 million years.

Optical atomic clocks use lasers Optical atomic clocks are even more accurate. While they have the same working principle, the resonance frequency here is in the optical range. Radiation in this range includes visible light (to humans) and ultraviolet and infrared radiation.

As part of an optical atomic clock, researchers use lasers to stimulate atomic transitions. The lasers' light is highly coherent: the emitted light waves all have the same frequency and their wavelengths are related to each other in a way that doesn't change. The result is light with more precise properties and great stability.

Optical atomic clocks use coherent light to achieve higher accuracy in two main ways.

The first is the higher operating frequency of atomic clocks. Say we have two clocks, A and B. A has a higher operating frequency than that of B — which means A will complete more oscillations than B in the same time.

As a result, A will be able to measure smaller increments of time more accurately because it has more cycles to count within that time frame.

The second reason is that optical atomic clocks have much narrower linewidths. The linewidth is the range of frequencies over which the transition occurs. The narrower the linewidth, the easier it is to tune the frequency of the

A server rack containing three independent optical clocks, a 1-U power supply, a control laptop for each clock, an uninterruptible power supply, and a measurement system were loaded in a total rack volume of 23 U. The cargo container housing the rack was craned onto the deck of the HMN25 Aotearoa, where it remained for a three-week naval exercise. NATURE 628, PAGES 736-749 (2024)

optical light that produces the resonance. This leads to higher accuracy because it enables more precise changes.

The most commonly used atom in optical atomic clocks is strontium (Sr). It has narrow linewidths and stable optical transitions.

Researchers at the Indian Institute of Science Education and Research, Pune, are working on a strontium optical atomic clock. Their peers at the Inter-University Centre for Astronomy and Astrophysics in the same city are developing a similar clock with ytterbium ions. These devices, once ready, will bring precision timekeeping in India to the optical regime.

Building a portable device The researchers in the *Nature* study developed an optical atomic clock that uses molecular iodine as the frequency standard.

Traditional optical atomic clocks are large and not easy to transport. Scientists have previously attempted to make them portable. Those in the new study wished to fit them within a standardised rack, of the sort used in data centres, laboratories, and telecommunications facilities.

To do this, the team miniaturised the clock's spectrometer, laser system, and frequency comb.

The spectrometer, used to measure the frequencies of transitions, was designed to have a volume of 2.5 litres. The laser system was built using optical fibres —

slender, flexible, transparent cables made of glass or plastic and which can transmit light over long distances. The system thus had a volume of only 1 litre, and operated with light of wavelength 1,064 nm.

A frequency comb is a device that generates a series of equally spaced optical frequencies. This provides a stable and accurate reference for tracking the atomic transitions and generating precise optical frequencies. The frequency comb occupied a volume of 0.5 litres.

The researchers also equipped the clock with a software control system that could autonomously initialise the clock from an 'off' state to a fully operational state. It monitors temperature, identifies specific transitions, activates some components, and ensures the system stays stable by continuously checking for problems.

As a result, the final clock had a total volume of 35 litres — about the size of a large backpack. It weighed around 26 kg and consumed 88 W of power, which is

just above the consumption of an incandescent light bulb.

Optical atomic clocks at sea The researchers conducted initial tests at the U.S. National Institute of Standards and Technology (NIST) in April 2022. They operated two prototypes, called PICKLES and EPIC, autonomously for 34 days. The optical atomic clocks' accuracy fluctuated less over short periods, outperforming NIST's hydrogen maser STDS, one of the world's most accurate and stable atomic clocks, which is based on hydrogen atoms.

The optical atomic clocks also had 10x lower long-term drift compared to rubidium atomic clocks. This means that over long periods, the rate at which the clock's frequency changes is much lower compared to changes in rubidium atomic clocks. It is a sign of the compact clock's high stability.

The researchers also deployed the two clocks plus another, called VIPER, on a boat at Pearl Harbor in Hawaii to test them at sea. VIPER was built with a similar architecture but with a more simplified laser design.

Despite the ship's motion, a temperature fluctuation of 2.3 degrees C, and 4-5% changes in humidity, the clocks were nearly as stable as they were in laboratory conditions for up to 1,000 s at a time. When operated for more than a lakh seconds a time, the clock was still highly stable but also more susceptible to being affected by temperature fluctuations.

Accuracy trade-offs and applications Atomic clocks are prized for their accuracy, losing or gaining just one second over 300 million years. Optical atomic clocks only lose or gain a second every 300 billion years.

The new iodine clock isn't as accurate as an optical atomic clock in the laboratory, trading it off for mobility and robustness. But it is still accurate enough to lose or gain a second only every 9.1 million years.

The development of such setups is a necessary first step for their use in navigation, maritime communication, and scientific research. For example, they can help monitor underwater seismic and volcanic activity with great precision. Only next step, they can help scientists conduct experiments that test the theories of relativity and potentially reduce the cost of satellite-based navigation.

UN declares 2025 the Year of Quantum Science

The Hindu Bureau

The United Nations has said 2025 will be designated the "International Year of Quantum Science and Technology". In a statement, the body said the initiative will be "year-long", "worldwide", and that it will "be observed through activities at all levels aimed at increasing public awareness of the importance of quantum science and applications".

The proclamation is the result of a resolution led by Mexico in May 2023 and which was soon joined by other countries. By November that year, almost 60 countries had co-sponsored the resolution and the UNESCO General Conference adopted it. In May this year, Ghana submitted a draft resolution to the U.N. General Assembly asking for an official proclamation, with the support of over 70 other countries. The General Assembly accepted on June 7.

The timing isn't entirely coincidental. Next year will be a century since the German physicist Werner Heisenberg published a famous paper in which he reinterpreted a series of tweaks — required for classical mechanics to make sense of the quantum phenomena being discovered in the late 19th and early 20th centuries — to lay the foundation stone of what would come to be called quantum mechanics. He was awarded the Nobel Prize for physics seven years later, roughly around the time he devised his famous uncertainty principle.

According to the UN statement, the proclamation has also received the endorsements of the International Union of Pure and Applied Physics, the International Union of Pure and Applied Chemistry, the International Union of Crystallography, and the International Union of History and Philosophy of Science and Technology.

Quantum science and technologies have been featuring more often in public conversations and issues of late thanks to quantum computers. While fully operational machines of this type don't yet exist, researchers and industry experts believe it is a matter of time.

In line with this belief, the Government of India announced a "National Quantum Mission" in April 2023 at a cost of Rs 6,000 crore, to be implemented from 2023 to 2031 by the Department of Science & Technology (DST). According to Akhilesh Gupta, a senior DST advisor and the head of the Mission, it will have four verticals: quantum computing, quantum communication, quantum sensing and metrology, and quantum materials and devices.

Many researchers expect functional quantum computers will have transformative effects on electronics, clean energy, and drug development, given their superior computational abilities.

According to the U.N. statement, its proclamation "is a signal for any individual, group, school, institution, or government to use 2025 as an opportunity to increase awareness about quantum science and technology". It added that a steering committee is also "planning global initiatives and events, particularly those that reach audiences unaware of the importance of quantum science and technology."

Physics World reported that an opening ceremony is expected to be conducted on January 14, 2025, in Berlin.

NADDA TERM ENDS JUNE 30

Bhagwat's remarks on table, BJP works on rejig, poll review & president election

LIZ MATHEW
NEW DELHI, JUNE 11

EVEN AS the Ministers in the new NDA government took charge Tuesday, the BJP has begun to set in motion the process of re-jigging its organisation nationwide and, simultaneously, reviewing its Lok Sabha performance.

This exercise is expected to begin with a fresh membership drive and will conclude with the election of a new party president. It's still not clear if this will take place under a new working president or incumbent J P Nadda who has been inducted in the Modi government as Union Health Minister.

The party's Parliamentary Board, its apex decision-making body, will meet soon to decide. That meeting comes in the wake of RSS chief Mohan Bhagwat's unusually sharp comments Monday on the bitter Lok Sabha campaign that included a cautionary note too.

"A true sevak maintains decorum while working... The one who maintains decorum does his work, but remains unattached. There is no arrogance that I did this. Only such a person has the right to be called a sevak," Bhagwat had said.

Sources said these remarks, seen as a veiled criticism of the BJP leadership, are neither "routine nor normal."

Production stalled, MeitY & Commerce want visa norms for Chinese eased

RAVI DUTTA MISHRA & SOUMYARENDRA BARKI
NEW DELHI, JUNE 11

AT LEAST TWO Union ministries — Electronics and Information Technology and Commerce and Industry — are pushing for easier visa norms for entry of Chinese technicians after the domestic industry raised concerns that export orders were not being fulfilled due to delays in grant of visas.

A senior official in the Commerce and Industry min-

istry told *The Indian Express*, "The department is aware of the concern raised by the industry and we are pushing for limited entry of Chinese technicians to resolve the issue."

The issue was flagged in several forums including the Board of Trade meeting in January this year. The BCI plays an advisory role to the Commerce and Industry Ministry and the annual meetings are attended by central and state government officials, alongside all major trade

NEET-UG row: Retest for 1,563 candidates an option; exam sanctity affected, says top court

DEEKSHA TERI & ANONNA DUTT
NEW DELHI, JUNE 11

A RETEST for all 1,563 candidates who were awarded "grace marks" for "loss of time" in the National Eligibility-cum-Entrance Test (Undergraduate) this year is among the options being considered by the four-member committee formed last week by the National Testing Agency (NTA) following an uproar over the extraordinarily large number of candidates scoring well in the entrance test this time — 67 secured the perfect score of 720/720.

The *Indian Express* has learned that the committee, headed by a former UPSC chairman, in its first few meetings, has

UGC gives nod to universities to admit students twice a year, DU says good idea

ABHINAYA HARIGOVIND
NEW DELHI, JUNE 11

THE UNIVERSITY Grants Commission (UGC) has allowed higher education institutions to admit students twice a year.

While earlier regulations allowed students to be admitted only during July-August, the UGC's recent decision means that students can now be admitted in January/February and in July/August from the upcoming academic session.

The UGC decision leaves it to the institutions to decide if they want to offer admissions in both the cycles or just one, and this will depend on their infrastructure and faculty.

The UGC has said that biannual admissions are not mandatory, but the decision now provides "flexibility" to institutions that might want to "increase their student intake and offer new programmes in emerging areas".

UGC Chairman M Jagadesh Kumar told The Indian Express, "Every university offers admissions in July/August. In addition to this, if they wish to offer programmes in January, they are welcome to."

"The situation can be unique to a particular institution; the challenges can vary from institution to institution. The UGC provides the broader regulatory

framework enabling the institutions to work out the details themselves and implement it if they think they can," he said.

On whether universities may now be able to offer admissions to different sets of courses in the two admission cycles, he said: "It is a choice for them... depending on the infrastructure that is available. For a science programme, if they find that for the students admitted in the July session lab facilities are used in the daytime, they may want to use lab facilities in the evening for the session that began in January, so that there is better utilisation of resources available in universities."

The UGC first attempted this biannual admission process with open and distance learning (ODL), and online mode programmes.

On why the UGC decided to allow biannual admissions, Kumar said that during the trials in ODL and online, the UGC found that nearly half a million students who would have otherwise waited for one year to join these programmes have got the opportunity to join in January itself.

"There is a possibility that even in the physical mode, students who have missed admissions for various reasons in July/August, will have the opportunity to join in January instead

of waiting for one full year. It is also a global practice. It also has the potential to increase the GER (Gross Enrolment Ratio) also," he said.

If universities now intend to begin a second session in January, they will have to get the decision approved in their academic and executive councils, and amendments will have to be made in their institutional regulations. This biannual admission system can apply to PhD, postgraduate and undergraduate programmes.

In the case of programmes to which admissions are based on entrance exams, the UGC Chairman said, "For PhD admissions, currently all universities admit in July. We are conducting UGC-NET twice a year. So, universities can now begin to admit twice a year in PhD programmes. For postgraduate programmes, CUET (PG) is not mandatory, it is only an option and many universities admit based on their own entrance exam or marks in undergraduate programmes. Now they can offer biannual admissions in masters programmes".

Similarly in undergraduate programmes, except for Central universities, CUET (UG) is not mandatory for other universities, he said.

"They use a combination of admission criteria including CUET (UG) scores, their own en-

trance exam, board exam marks. If any university wants to start UG programmes in a second session, they are free to do it," he said.

On whether entrance exams may now have to be held twice a year, Kumar said: "Entrance exams are now technology driven. Ideally, if they are conducted twice a year, it will be beneficial to students. One-by-one, we are trying to implement that. Over a period of time, I hope we will have most entrance exams conducted by the NTA twice in a year".

Delhi University Vice Chancellor Yogesh Singh said, "It is a good idea, a very common idea in the western world where many universities are doing this. We are also very open... in PhD, we are already doing it, we are admitting students twice a year. For UG and PG also, we are very open and we will initially implement it in a few programmes and then extend it to other programmes."

On whether the new admission system is likely to be in place from the upcoming session onwards, he said, "No... admissions have already started, so can't do it right now."

Asked about courses for which admissions are based on entrance exams, he said: "We will have to conduct entrance exams twice a year."

Existing process, change

Students are now admitted once a year, in a single academic session that begins in July/ August. The UGC's decision will allow universities to admit students in two cycles, in July/ August and then in January/February, to undergraduate, postgraduate and PhD programmes.

The new system could allow universities to reflect the admission cycles in some countries that admit students twice a year, and where the courses that are available in these different admission cycles may also vary. Universities in the United States, for instance, have 'intakes' in the fall (session that begins in August/ September) and in the spring (session that begins in January).

Reason and beneficiaries

The UGC has already attempted the biannual admission process for open and distance learning, and online programmes, and found that "permitting a second academic session in a year has helped nearly half a million students join their degree programmes without waiting for one full academic year".

This, according to UGC Chairman M Jagadesh Kumar, could benefit students who may have missed admissions in the July/ August session on account of health issues, delays in board exam results, or personal reasons. With admissions opening twice a year, they need not wait for an entire year before they can apply again.

Kumar has said that universities abroad follow a biannual admission system, and this system in Indian institutions "can enhance their international collaborations and student exchanges".

He has also said that this system could also help increase the 'gross enrollment

The new system could help global collaborations, according to UGC chairman M Jagadesh Kumar. *File*

ratio' (GER). For higher education, GER is the ratio of students enrolled to the population of the age group eligible for higher education.

What next for institutions

The decision to open admissions twice a year lies with the universities — their academic and executive councils will have to take the call. It will be up to the universities to work out what programmes they might open up for biannual admissions. The availability of infrastructure and faculty will be crucial in deciding to admit students in two admission cycles.

While the UGC has allowed higher education institutions to admit students twice a year from the coming academic year, Delhi University Vice Chancellor Yogesh Singh pointed out that admissions for the upcoming session have already begun.

Chairman Kumar said: "This a provision that we are providing... It is quite possible that it will not happen immediately. The universities may have to work on their infrastructural requirements, faculty requirements, and then plan it over a period of time."

Singh said the university is open to the idea and may implement it initially for a few programmes before extending it to others.

There is also the question of admissions that are based on entrance exams. Kumar said that it could be "beneficial to students" if they are conducted twice a year.

MP completes preparations for second cheetah home – Gandhi Sagar Sanctuary

EXPRESS NEWS SERVICE

BHOPAL, JUNE 11

THE MADHYA Pradesh government has completed preparations for its ambitious cheetah reintroduction project at Gandhi Sagar Wildlife Sanctuary, which is slated to be the second home for cheetahs in India after Kuno National Park, an official said on Tuesday.

Teams from Kenya and South Africa had earlier visited Gandhi Sagar to assess the conditions, the official said.

He also said that Madhya Pradesh Chief Minister Mohan Yadav chaired a meeting of the wildlife board in which it was informed that preparations have been completed. Prey animals have been relocated from Kanha, Satpura and Sanjay tiger reserves, the official said.

A wildlife department official said, "All preparations have been completed for reintroduction of the cheetah in Gandhi Sagar Sanctuary. Cheetahs have been reintroduced from Kanha and other places to increase their population in the region. 50 gaurs (Indian bison) have also been successfully reintroduced from Kanha and Satpura Tiger Reserve to the Sanjay Tiger Reserve (in Sidhi district)."

12 % hike in Schengen visa fee comes into effect

DIVYAA

NEW DELHI, JUNE 11

FROM TUESDAY onwards, the cost of a short-stay Schengen visa has increased by 12 per cent. While the Schengen visa fee for adults has increased to 90 euros from 80 euros, children between the age of 6 and 12 will now pay 45 euros instead of 40 euros. It is still free for those under six years of age.

The EU attributes the increase to both inflation and growing civil worker wages.

Schengen visa allows the holder to travel freely in the Schengen Area comprising 29 European countries, for short stays of a maximum of 90 days in any 180-day period. The visas are not purpose-bound, but they do not grant the right to work.

Schengen countries are among the most popular destinations for Indian travellers with a high preference for destinations like France, Spain, Germany, Italy and Switzerland, among others. Schengen countries account for around 20 per cent of India's out-bound traffic, as per estimates.

BOUND TRAFFIC, AS PER ESTIMATES.

The hiked fee comes into effect globally as per a statement by the European Commission. The EU visa costs were reviewed in December 2023, as Schengen Visa Code mandates review every three years. The fee was increased from 60 euros to 80 euros in February 2020. A few weeks ago, the EU had announced a major reprieve for Indian travellers to Europe, offering multiple entry Schengen visas with longer validity. Frequent Indian travellers can now apply for five-year multiple entry visas, which puts them on par with "visa-free nationals".

Indian nationals can now be issued long-term, multi-entry Schengen visas valid for two years after having obtained and used two visas in past three years. "The two-year visa will normally be followed by a five-year visa, if the passport has sufficient validity remaining," said a statement by the European Commission in April.

Rupee closes at record low

SACHIN KUMAR
Mumbai, June 11

THE RUPEE FELL 6 paise against the dollar to close at a record low of 83.57 on Tuesday, weighed down by a strong dollar. The weakness in the local currency was in sync with that of other Asian currencies and comes ahead of the US Federal Reserve's rate decision this week.

The local currency plunged to as low as 83.5725, near to its previous record low of 83.5750 touched in April, but likely intervention from the Reserve Bank of India (RBI) prevented any further fall in the rupee.

"Stronger than expected US data and political uncertainty after the French president called for snap elections

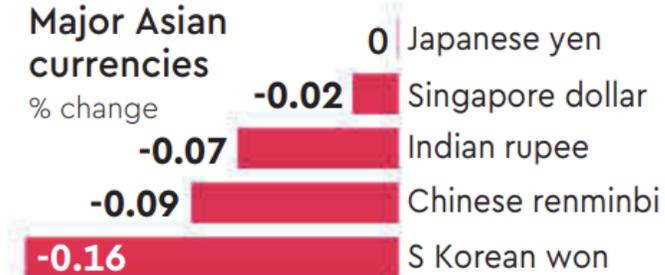

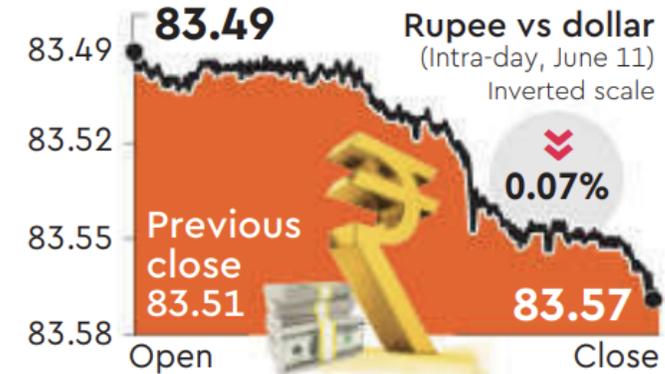

pushed euro-US dollar pair lower and the dollar index higher. Oil demand and rising crude oil prices are further adding to rupee weakness," Kunal Sodhani, vice-president - treasury, Shinhan Bank, told *FE*. "RBI stepped in to cap the slide in rupee and was seen selling dollar around 83.54 level," he added.

Sodhani said Indian bonds will be included in JP Morgan Bond Index from this month which will start attracting debt inflows, adding that 83.30 now acts as a support while 83.80 acts as a resistance for rupee.

Analysts say the rupee will continue to remain under pressure and may fall to around 85 before recovering to 83 in the next 2-3 quarters.

- **Positive: Weaker rupee should theoretically give a boost to India's exports, but in an environment of uncertainty and weak global demand, a fall in the external value of rupee may not translate into higher exports**

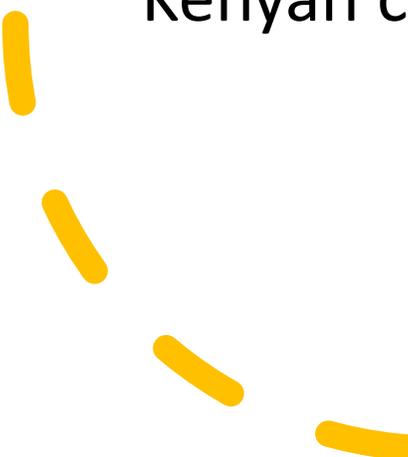

- **Negative:**

- **It poses risk of imported inflation, and may make it difficult for the central bank to maintain interest rates at a record low for longer.**
 - **India meets more than two-thirds of its domestic oil requirements through imports.**
 - **India is also one of the top importers of edible oils. A weaker currency will further escalate imported edible oil prices and lead to a higher food inflation.**
- 

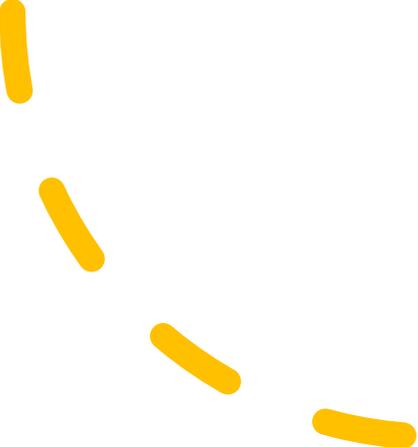

- 
- **Q1. Which one of the following is not the most likely measure the Government/RBI takes to stop the slide of Indian rupee? (2019)**
 - **(a) Curbing imports of non-essential goods and promoting exports**
 - **(b) Encouraging Indian borrowers to issue rupee denominated Masala Bonds**
 - **(c) Easing conditions relating to external commercial borrowing**
 - **(d) Following an expansionary monetary policy**
- 

Indian House Crows

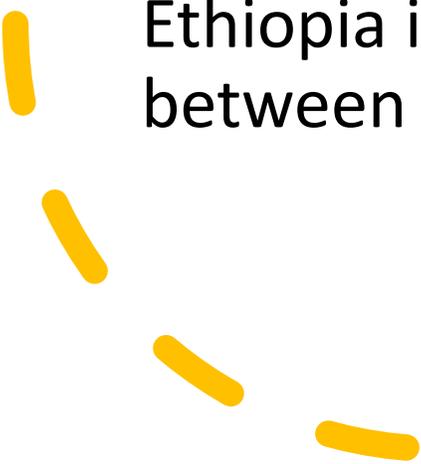

- 
- Recently the Kenyan government has announced an action plan to eliminate a million Indian House Crows (*Corvus splendens*) by the end of 2024.
 - This decision stems from the birds' significant negative impact on local ecosystems and their nuisance to the public, particularly in the Kenyan coastal region.
- 

- 
- What is the Kenyan Government Action Plan?
 - Invasive Species Issue: The Indian House Crow is described as an invasive alien species from India and parts of Asia, introduced to East Africa via shipping activities.
 - Ecological Impact: The crows prey on endangered local bird species, destroy nests, and eat eggs and chicks, leading to a decline in indigenous bird populations.
- 

- 
- **Historical Effort:** A similar effort in Kenya over 20 years ago managed to reduce their numbers temporarily.
 - **Government and Community Response:** An action plan to combat the crow menace includes mechanical and targeted methods for culling the birds, and use of licensed poison for population control.
- 

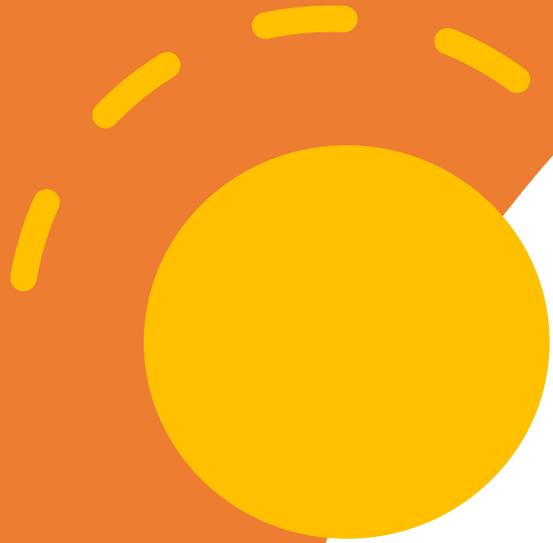

- 
- 
- Kenya is located in East Africa.
 - Its terrain rises from a low coastal plain on the Indian Ocean to mountains and plateaus at its centre.
 - Kenya shares common borders with five countries namely: Tanzania in the South, Uganda in the West, South Sudan in the North West, Ethiopia in the North and Somalia in the East Kenya's is located between the Indian Ocean and Lake Victoria.

Lake Turkana, the world's largest desert lake, is part of the Omo-Turkana basin, which stretches into four countries: Ethiopia, Kenya, South Sudan and Uganda.

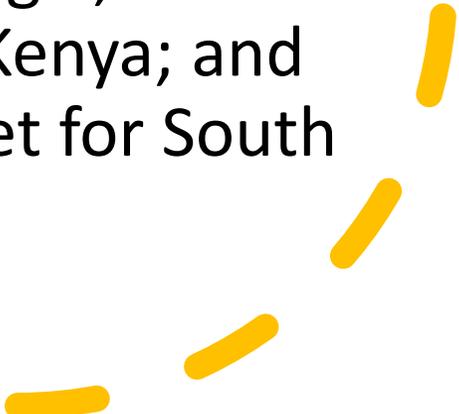

UN-Habitat maintains its headquarters at the United Nations Office in Nairobi, Kenya.

Global Plastic Treaty

- 
- The ongoing discussions in the Intergovernmental Negotiating Committee (INC-4) of the United Nations Environment Agency (UNEA) for a global treaty on plastic pollution prompt considerations for a fair transition for informal waste workers.
- 

- 
- What is the Global Plastic Treaty?
 - The Global Plastics Treaty, initiated in 2021, is a pivotal international effort aimed at combatting plastic pollution on a global scale.
 - Established during the fifth UN Environment Assembly in Nairobi, Kenya, the treaty has progressed through various meetings worldwide, including Dakar, Senegal; Uruguay; Paris, France; Nairobi, Kenya; and Canada, with the final meeting set for South Korea.
- 

- 
- Notably, the International Alliance of Waste Pickers has played a significant role, advocating for the inclusion of informal waste pickers in the treaty discussions to promote sustainable waste management and equitable policies.
- 

POLYMER TYPES	EXAMPLES OF APPLICATIONS	SYMBOLS
Polyethylene Terephthalate (PET)	Fizzy drink and water bottles. Salad trays.	 PET
High Density Polyethylene (HDPE)	Milk bottles, bleach, cleaners and most shampoo bottles.	 HDPE
Polyvinyl Chloride (PVC)	Pipes, fittings, window and door frames (rigid PVC). Thermal insulation (PVC foam) and automotive parts.	 PVC
Low Density Polyethylene (LDPE)	Carrier bags, bin liners and packaging films.	 LDPE
Polypropylene (PP)	Margarine tubs, microwaveable meal trays, also produced as fibres and filaments for carpets, wall coverings and vehicle upholstery.	 PP
Polystyrene (PS)	Yoghurt pots, foam hamburger boxes, plastic cutlery, protective packaging for electronic goods and toys. Insulating material in the building and construction industry.	 PS
Unallocated references	Any other plastics that do not fall into any of the above categories - for example polycarbonate which is often used in glazing for the aircraft industry.	 0

- 
- **Why is there a great concern about the 'microbeads' that are released into the environment? (UPSC 2019)**
 - (a) They are considered harmful to marine ecosystems.
 - (b) They are considered to cause skin cancer in children.
 - (c) They are small enough to be absorbed by crop plants in irrigated fields.
 - (d) They are often found to be used as food adulterants.
- 

- 
- **In India, ‘extend producer responsibility’ was introduced as an important feature in which of the following? (UPSC 2019)**
 - (a) The Bio-medical Waste (Management and Handling) Rules, 1998
 - (b) The Recycled Plastic (Manufacturing and Usage) Rules, 1999
 - (c) The e-Waste (Management and Handling) Rules, 2011
 - (d) The Food Safety and Standard Regulations, 2011

safeEXO-Cas

Scientists at Columbia University College of Dental Medicine have developed a new gene editing platform called “safeEXO-Cas,” using exosomes as delivery vehicles for CRISPR/Cas9 components.

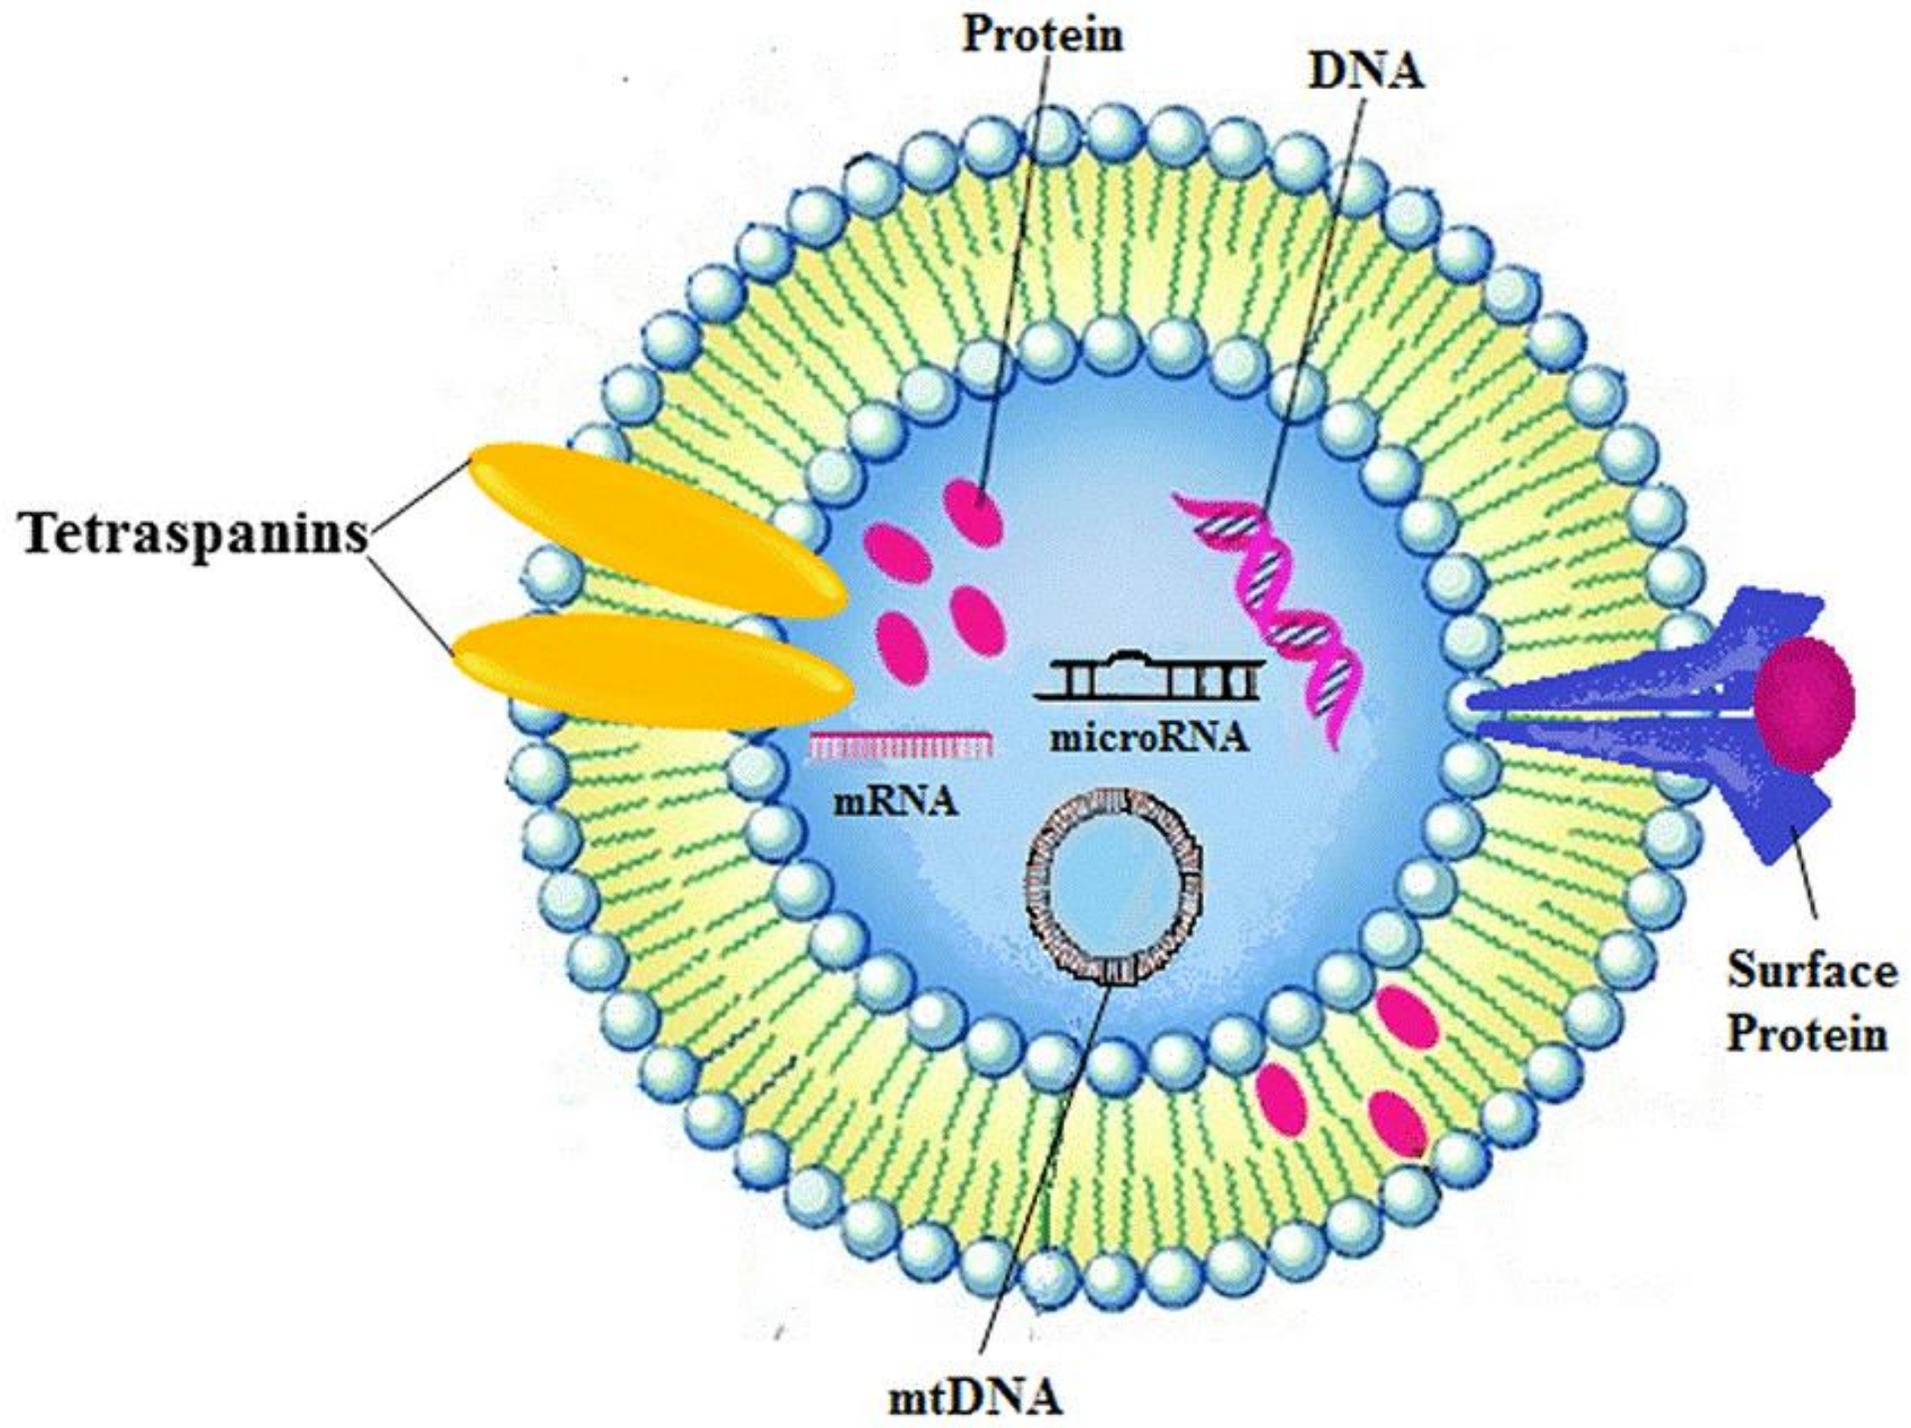

This platform enhances precision in targeting specific cells and tissues, overcoming the limitations of current delivery methods.

- 
- **What are Exosomes?**
 - **Exosomes are naturally occurring vesicles that act as vehicles for transporting molecules**, such as proteins and genetic material, between cells. These tiny membrane-bound structures play a crucial role in cell-to-cell communication and have potential applications in drug delivery, diagnostics, and therapeutics.

-

It is a genome editing tool, that works as a cut-and-paste mechanism on DNA strands, allowing targeted modifications to the genome.

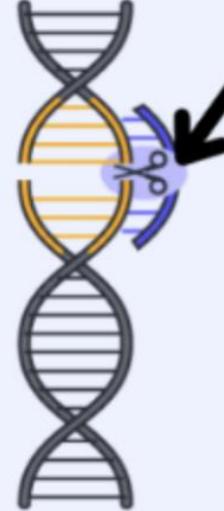

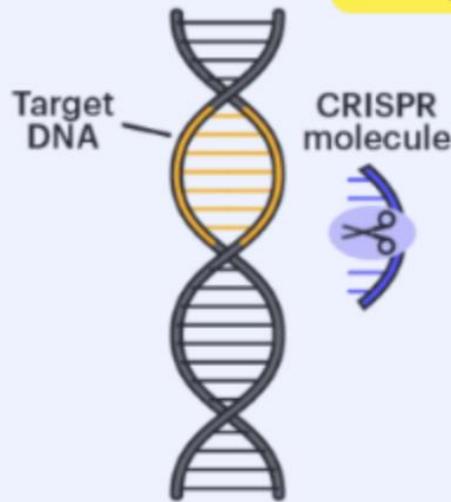

Its applications include editing genes in human embryos, improving crop resilience, and treating diseases like sickle cell disease.

CRISPR-Cas9 is a unique technology that enables editing parts of the genome by removing, adding or altering sections of the DNA

Guide RNA (gRNA) guides Cas9 to the right part of the genome

Enzyme Cas9 (acts as a pair of 'molecular scissor')

1 **SEARCH**
A CRISPR molecule finds a precise location in the target DNA.

2 **CUT**
The CRISPR enzyme cuts the target DNA at the point found by the guide.

3 **EDIT**
A new custom sequence can be added when the DNA is repaired.

A group of people are clapping in a dimly lit room. The focus is on the hands and forearms of several individuals, with some wearing watches. The background is blurred, showing more people and a window. An orange horizontal bar is located in the top left corner.

Thank you
guys.
